## QUARDRILATERALS

1. The diagonals $A C$ and $B D$ of a parallelogram $A B C D$ intersect each other at the point $O$. If Angle $D A C=32^{\circ}$ and angle $A O B$ $=70^{\circ}$ then find angle DBC.
2. Through $A, B$ and lines $R Q, P R$ and $Q P$ have been drawn respectively, parallel to sides $B C, C A$ and $A B$ of a triangle $A B C$ as shown in figure. Show that $B C=Q R / 2$

3. In the following figure, $A B C D$ is a rectangle such that angle $C F E=144^{\circ}$ and angle $A B E=30^{\circ}$. Find the measure of Angle BEF.

4.Diagonal $A C$ of a parallelogram $A B C D$ bisects angle $A$. Show that :
(i) it bisects angle C
(ii) $A B C D$ is a rhombus.

5.In a parallelogram, show that the angle bisectors of two adjacent angles intersect at right angles.
6.In the figure, $A B C D$ is a trapezium with $A B$ II DC. $F$ is the midpoint of $B C$. $D F$ and $A B$ are produced to meet at $E$. Show that $F$ is also the mid-point of $D E$.

4. $D, E$ and $F$ are respectively the mid-points of the sides $A B$, $B C$ and $C A$, respectively of a triangle $A B C$. Prove that by
joining these mid-points $D, E$ and $F$, the triangle $A B C$ is divided into four congruent triangles.
5. If $A B C D$ is a quadrilateral in which $A B I I C D$ and $A D=B C$, then prove that angle $A=$ angle $B$.
6. $E$ is the mid-point of median $A D$ of $A B C$ and $B E$ is produced to meet $A C$ at $F$. Show that $A F=\frac{1}{3} A C$
7. $A B C$ is triangle. $D$ is a point on $A B$ such that $A D=\frac{1}{4} A B$ and $E$ is a point on $A C$ such that $A E=\frac{1}{4} A C$. Prove that $D E=\frac{1}{4} B C$.
