## QUADRILATERALS

1. A diagonal of a rectangle is inclined to one side of a rectangle at $25^{\circ}$. Find the acute angle between the diagonals.
2. $A B C D$ is a rhombus with $\angle A B C=50^{\circ}$, Find $\angle A C D$.
3.PQRS is a parallelogram and line segments PA and RB bisect the angles $P$ and $R$ respectively. Show that PA || BR.
3. In a parallelogram, show that the angle bisectors of two adjacent angles intersect at right angles.
4. $A B C$ and $A D C$ are two right triangles with common hypotenuse $A C$. Prove that angle $C A D=$ angle CBD.
5. $D, E$ and $F$ are respectively the midpoints of the sides $A B, B C$ and $C A$ of triangle $A B C$. Prove that by joining these midpoints $D, E$ and $F$ the triangle $A B C$ is divided into four congruent triangles.
6. $A B C D$ is a parallelogram. $A B$ is produced to $E$ so that $B E=A B$. Prove that ED bisects BC.
7. $A B C D$ is a square and on the side $D C$, an equilateral triangle is constructed. Prove that $A E=B E$ and angle $D A E=15^{\circ}$.
8. In quadrilateral $A B C D$ there is a point $O$ inside it such that is $O B=O D$.Also, $A B=A D$ and $B C=D C$. Prove that $O$ lies on $A C$.
9. In the given figure, $I, m, n$ are three parallel lines. $I_{1}$ and $I_{2}$ are two transversals such that $P Q=4 \mathrm{~cm}=Q R$, If $T U=5 \mathrm{~cm}$ find $S T$.

11.Show that the quadrilateral formed by joining the midpoints of consecutive sides of a square is also a square.
12.Two Parallel Lines I and $m$ are intersected by a transversal P show that quadrilateral formed by bisector of interior angles is a rectangle.
10. If the diagonals of a parallelogram are equal, then show that it is a rectangle.
11. $A B C D$ is a quadrilateral in which $A B|\mid D C$ and $A D=B C$. Prove that angle $A=$ angle $B$ and angle $C=$ angle $D$
12. PQRS is a trapezium with PQ IIRS. M and N are mid-points of diagonals PR and QS. Prove that :
(a) MN II PQ II RS
(b) $\mathrm{MN}=\frac{1}{2}(\mathrm{PQ}-\mathrm{SR})$
